

Flask

```
from flask import Blueprint, render_template, session
```

```
webapp_bp = Blueprint(. . .)
```

```
@webapp_bp.route("/profile")
```

```
@requires_auth
```

```
def profile():
```

```
    return render_template(  
        'profile.html',  
        session=session.get('user')  
    )
```

Using Flask() or Blueprint()

- Flask has a session object

Flask

```
from flask import Blueprint, render_template, session

webapp_bp = Blueprint(. . .)

@webapp_bp.route("/profile")
@requires_auth
def profile():

    return render_template(
        'profile.html',
        session=session.get('user')
    )
```

Using Flask() or Blueprint()

- Flask has a session object
- Session object has a dictionary interface
