

Fast**A**P**I**

```
from utils import to_pretty_json
```

```
...
```

```
templates = Jinja2Templates(  
    directory="webapp/templates"  
)
```

```
templates.env.filters['to_pretty_json'] = to_pretty_json
```

Using FastAPI() or APIRouter()

- Is part of the Jinja2Templates class
- Use the variable `env.filters` to define filters

Using FastAPI() or

APIRouter()

• After a filter is created it is

available in templates

<p>Here is your profile information:</p>

<odiv>

<h2>Profile</h2>

{%blockcontent%}

```
<pre>{request:session['userinfo']|toPrettyJson}</pre>
```

<div class="json-container">

< / d i v >

<p>Welcome { {request.session['user_info'].name}}!</p>

< / d i v >

}%endblock%

< / d i v >

{%extends 'base.html'%}

<div>

Using FastAPI() or

APIRouter()

• is part of the

• use the variable

Uinjaja2TempLates class

filters

environmental friends to define
