

API Router

tip:

- Define your router at `webapp/routes.py`

- Remember to use router in all endpoints

• Register the router at main.py

```
from fastapi import APIRouter
```

```
webapp_router = APIRouter()
```

```
@webapp_router.get("/home")
```

```
def home():
```

```
    . . .
```

```
from fastapi import FastAPI
```

```
from auth.routes import auth_router
```

```
from webapp.routes import webapp_router
```

```
app = FastAPI()
```

```
app.include_router(webapp_router)
```

```
app.include_router(auth_router)
```

webapp/routes.py

main.py

APIRouter

- Define your router at `webapp/routes.py`
- Remember to use router in all endpoints
- Register the router at `main.py`

tip:

`webapp/routes.py`

```
from fastapi import APIRouter

webapp_router = APIRouter()

@webapp_router.get("/home")
def home():
    . . .
```

`main.py`

```
from fastapi import FastAPI
from auth.routes import auth_router
from webapp.routes import webapp_router

app = FastAPI()

app.include_router(webapp_router)
app.include_router(auth_router)
```
