1. Re-run the FastAPI application

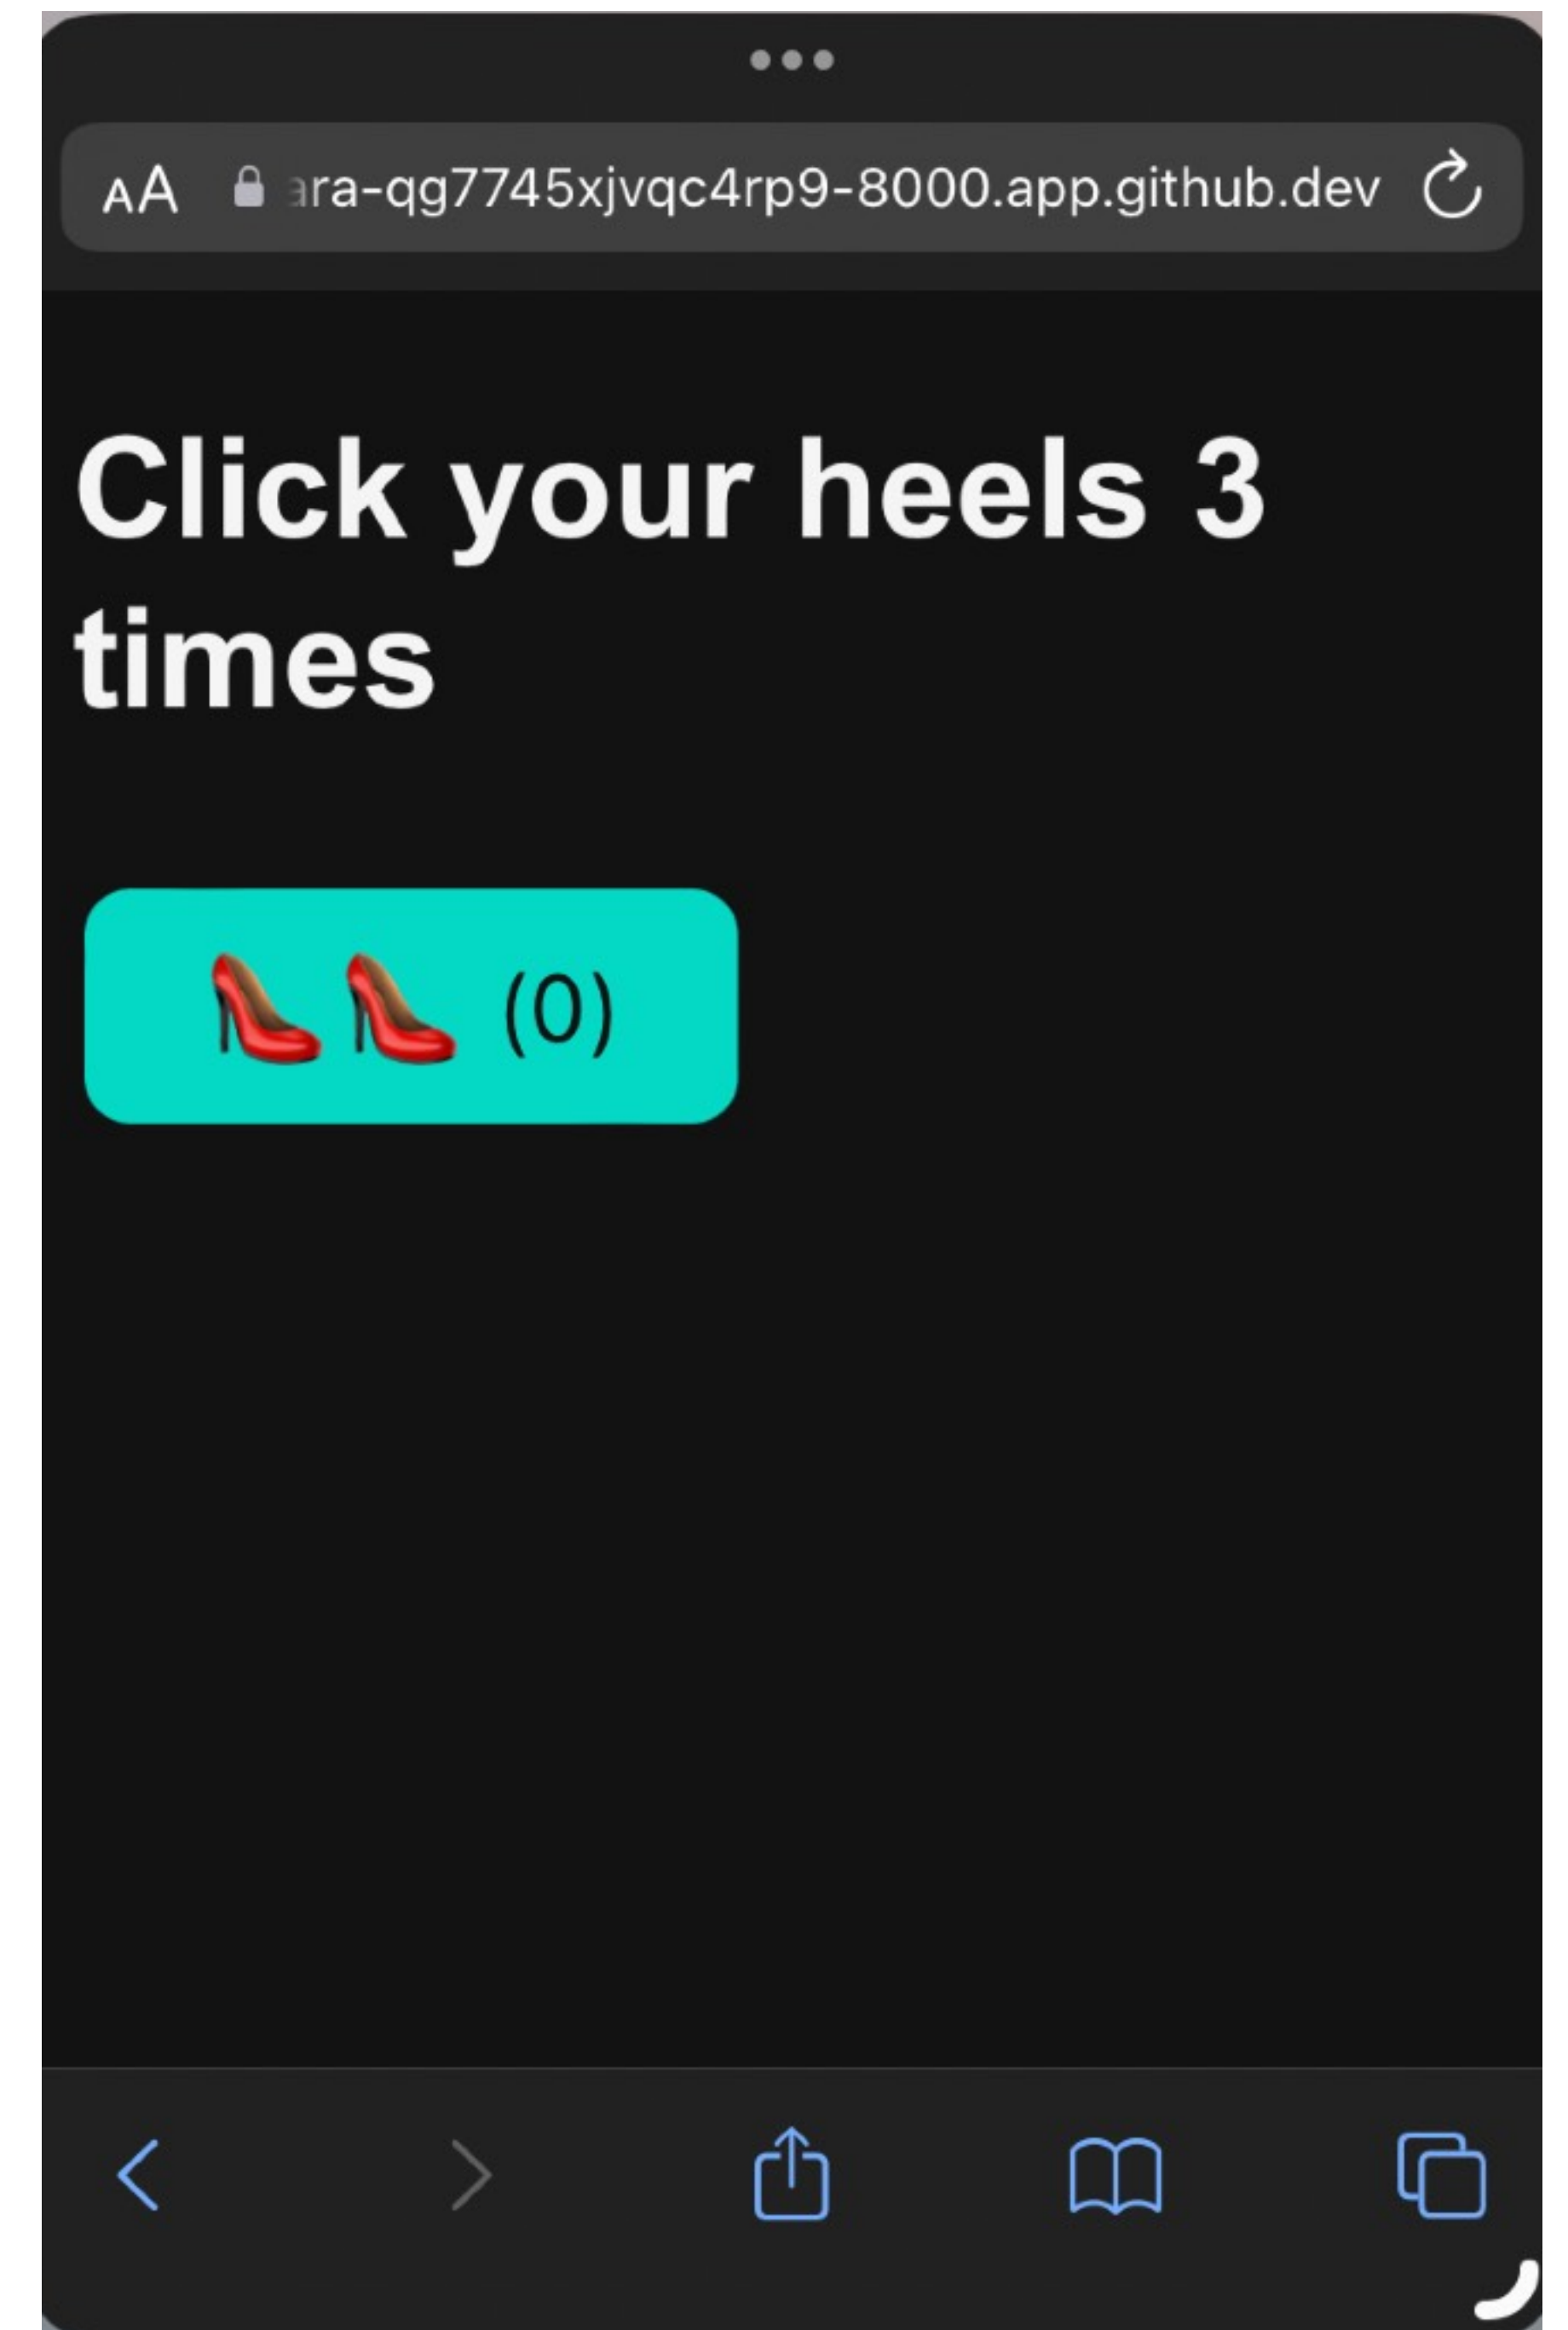

you should see this on the browser 🙌

Statistics Files

Static Files

1. Re-run the FastAPI application

you should see this on the browser 🙌

Flask

Using Flask() or Blueprint()

- Static files inside `static/` are automatically identified
- Can be directly linked on any template

```
...  
<link rel="stylesheet" href="/static/styles.css" />  
...  
<script src="/static/scripts.js"></script>
```

FastAPI

Using FastAPI() or APIRouter()

- Can also be directly linked
- But, you need to mount the folder first

```
from fastapi.staticfiles import StaticFiles  
  
app.mount(  
    "/static",  
    StaticFiles(directory="static"),  
    name="static"  
)
```
