Flask

Using Flask( ) or Blueprint( )

- Static files inside `static/` are automatically identified

- Can be directly linked on any template

```
. . .
<link rel="stylesheet" href="/static/styles.css" />

. . .
<script src="/static/scripts.js"></script>
```

FastAPI

Using FastAPI( ) or APIRouter( )

- Can also be directly linked

- But, you need to mount the folder first

```python
from fastapi.staticfiles import StaticFiles

app.mount(
    "/static",
    StaticFiles(directory="static"),
    name="static"
)
```
